

Destwin Quick Reference
Console Version 2.0
How to Set Batch File Time
19-DEC-11

This Quick Reference describes two Advanced Site Parameters (ASPs) that specify end batch time for credit card and echeck files.

For additional information on how to edit Advanced Site Parameters, view the help document titled, **'How to Edit Advanced Site Parameters'**.

Advanced Site Parameter Name	Sample Setting
Batch out time - use format HH:MM:SS For 6:15 pm you would enter 18:15:00	18:15:00
Batch out time (echecks) - use format HH:MM:SS For 6:15 pm you would enter 18:15:00	18:15:00

As demonstrated above, time should be set using a 24 hour clock. With the above setting both credit card and echeck batches would close at 6:15 pm. Payments made prior to 6:15 pm would be included in the current day's batch, payments after 6:15 pm would be included in the next day's batch. It is often advantageous to set the batch time for credit card processing to coincide with your gateway setting.
